

# INSPIREd practical examples of implementation of the directive in Slovenia

KETE Primož

Geodetic Institute of Slovenia

[primoz.kete@gis.si](mailto:primoz.kete@gis.si)

# Geodetic Institute of Slovenia and INSPIRE

- Geodetic Institute of Slovenia is involved in implementation of the INSPIRE directive in Slovenia since 2010.
- In the past three years, we were involved in two mayor projects of two different national ministries regarding transposition of several INSPIRE data specifications into national data models and products.
- I will present our approach and experiences with implementation of 8 INSPIRE data theme specifications into National topographic model (DTM) and national hydrography dataset.

# National topographic model

- The project "**Modernization of spatial data infrastructure to reduce risks and impacts of floods,**"
- 2013-2016
- Surveying and Mapping Authority (SMA) of Slovenia in co-operation with partners

MODERNIZATION OF SPATIAL DATA  
INFRASTRUCTURE TO REDUCE RISKS AND  
IMPACTS OF FLOODS

eea   
grants  
Iceland liechtenstein norway

# National topographic model (DTM)

## Državni Topografski Model

- Modification of the existing topographic data model regarding INSPIRE data rules
- The design and establishment of the National topographic model (DTM)
- Migration of the existing data to DTM
- Geodetic transformation of data into new national Spatial Coordinate Reference System (D96TM)

# 8 INSPIRE themes

*Hidrography*

*Geographical Names*

*Elevation*

*Buildings*

*Land Use*

*Transport Networks*

*Land Cover*

*Utility and Government Services*

# Existing national data

**DTK5** – National Topographic Data 1: 5000

*ESRI File GDB; object data model*

**REZI** – Registry of Geographical Names

*ORACLE database; object-relational data model*

**DMR** – Digital terrain model

*XYZ ASCII files*

# DTM - the vision

- DTM = object-relational data model that:
  - integrates existing data into a functional whole,
  - has connectivity to external databases (within SME, later gradually with other entities on national level)
  - has possibility of upgrade with additional content (modularity and scalability)

# DTM-Basic principles (1/3)

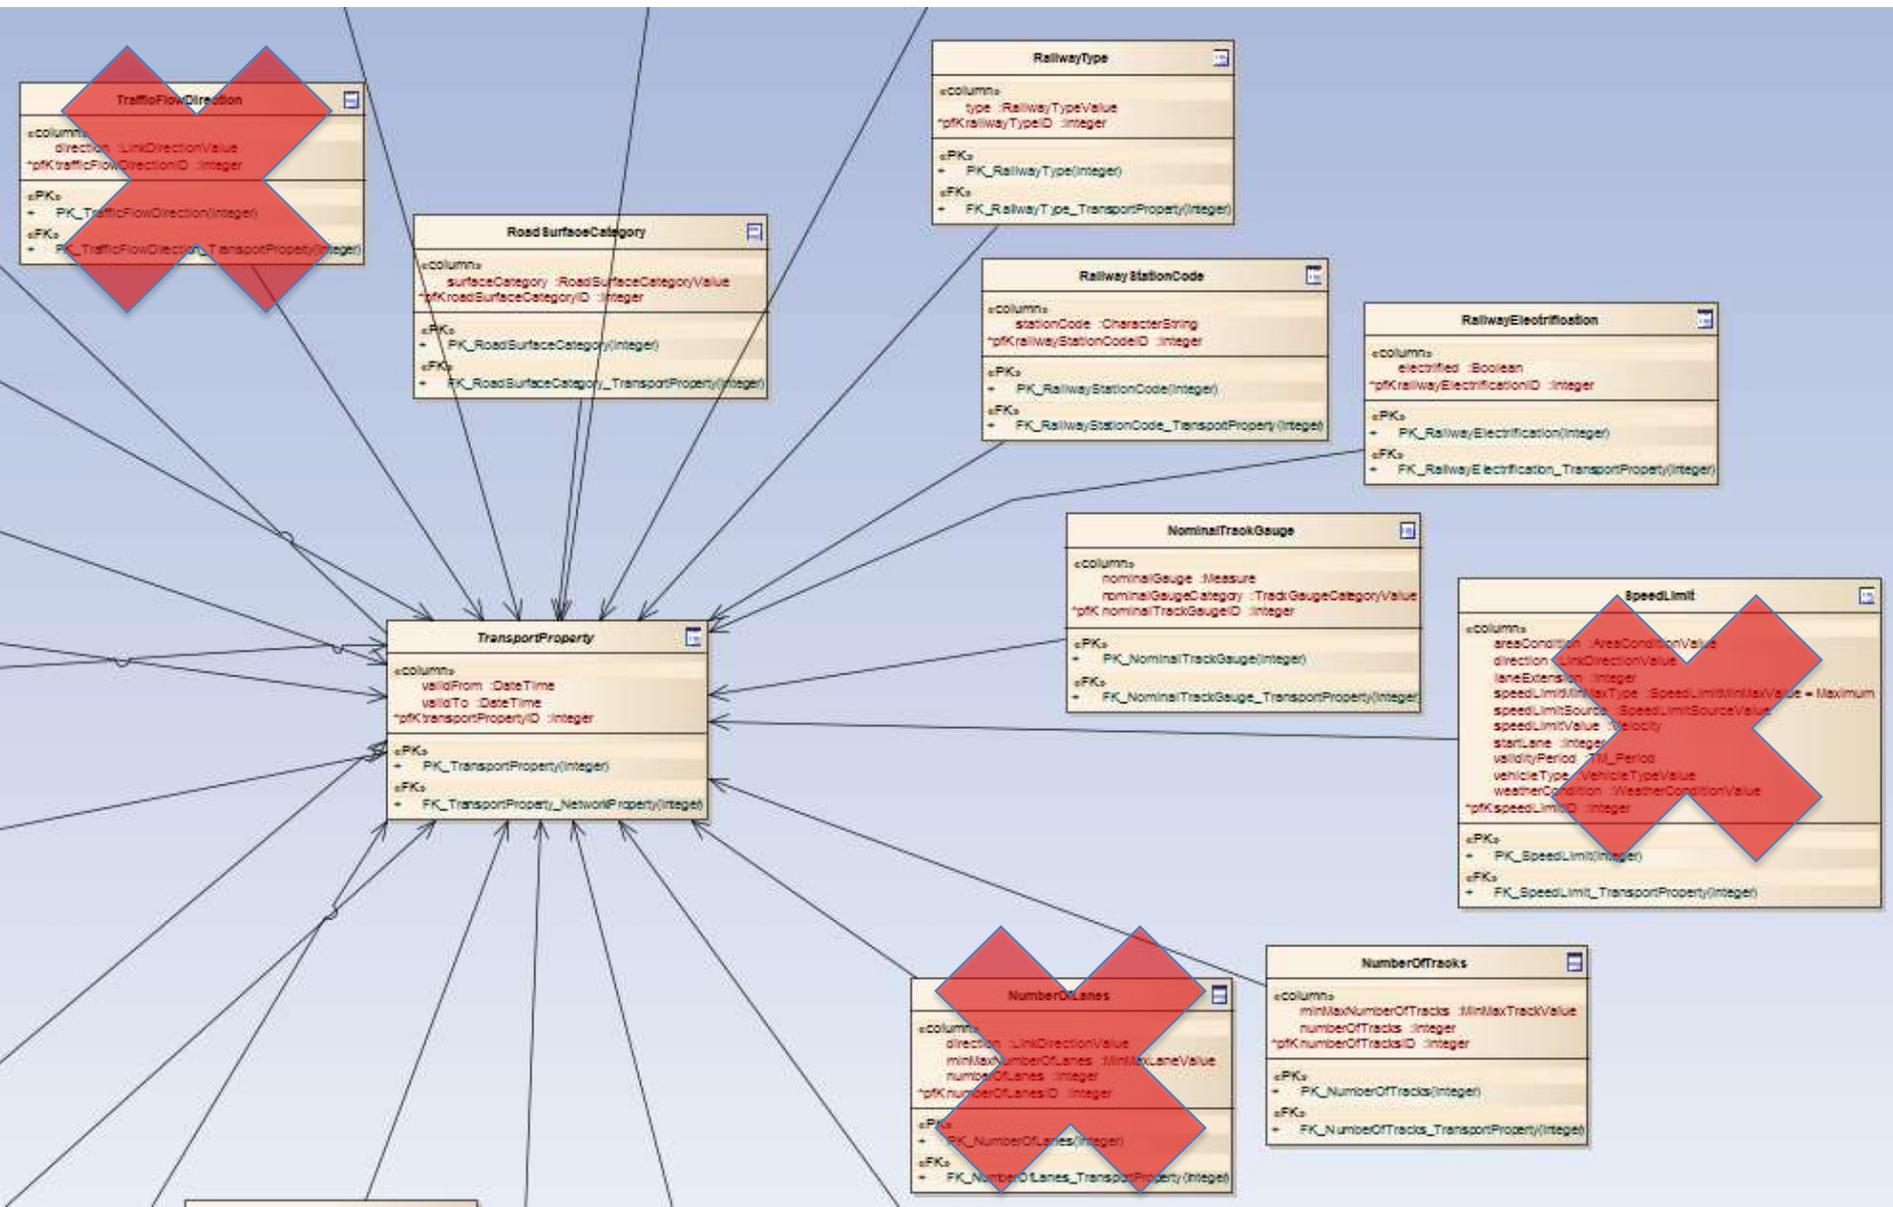

- expanded the usage of the existing topographic data with **semantic enrichment** - „*not only for cartographic visualization*“,
- resolved **redundancy** and **mismatches** in the existing data,
- included the full range of the existing national data (for the selected themes) and model them according to INSPIRE specifications and national requirements – „**no loses**“.
- included selected non topographic elements for a long term unification on national level (INSPIRE exceeds „topographic“ framework).

# DTM-Basic principles (2/3)

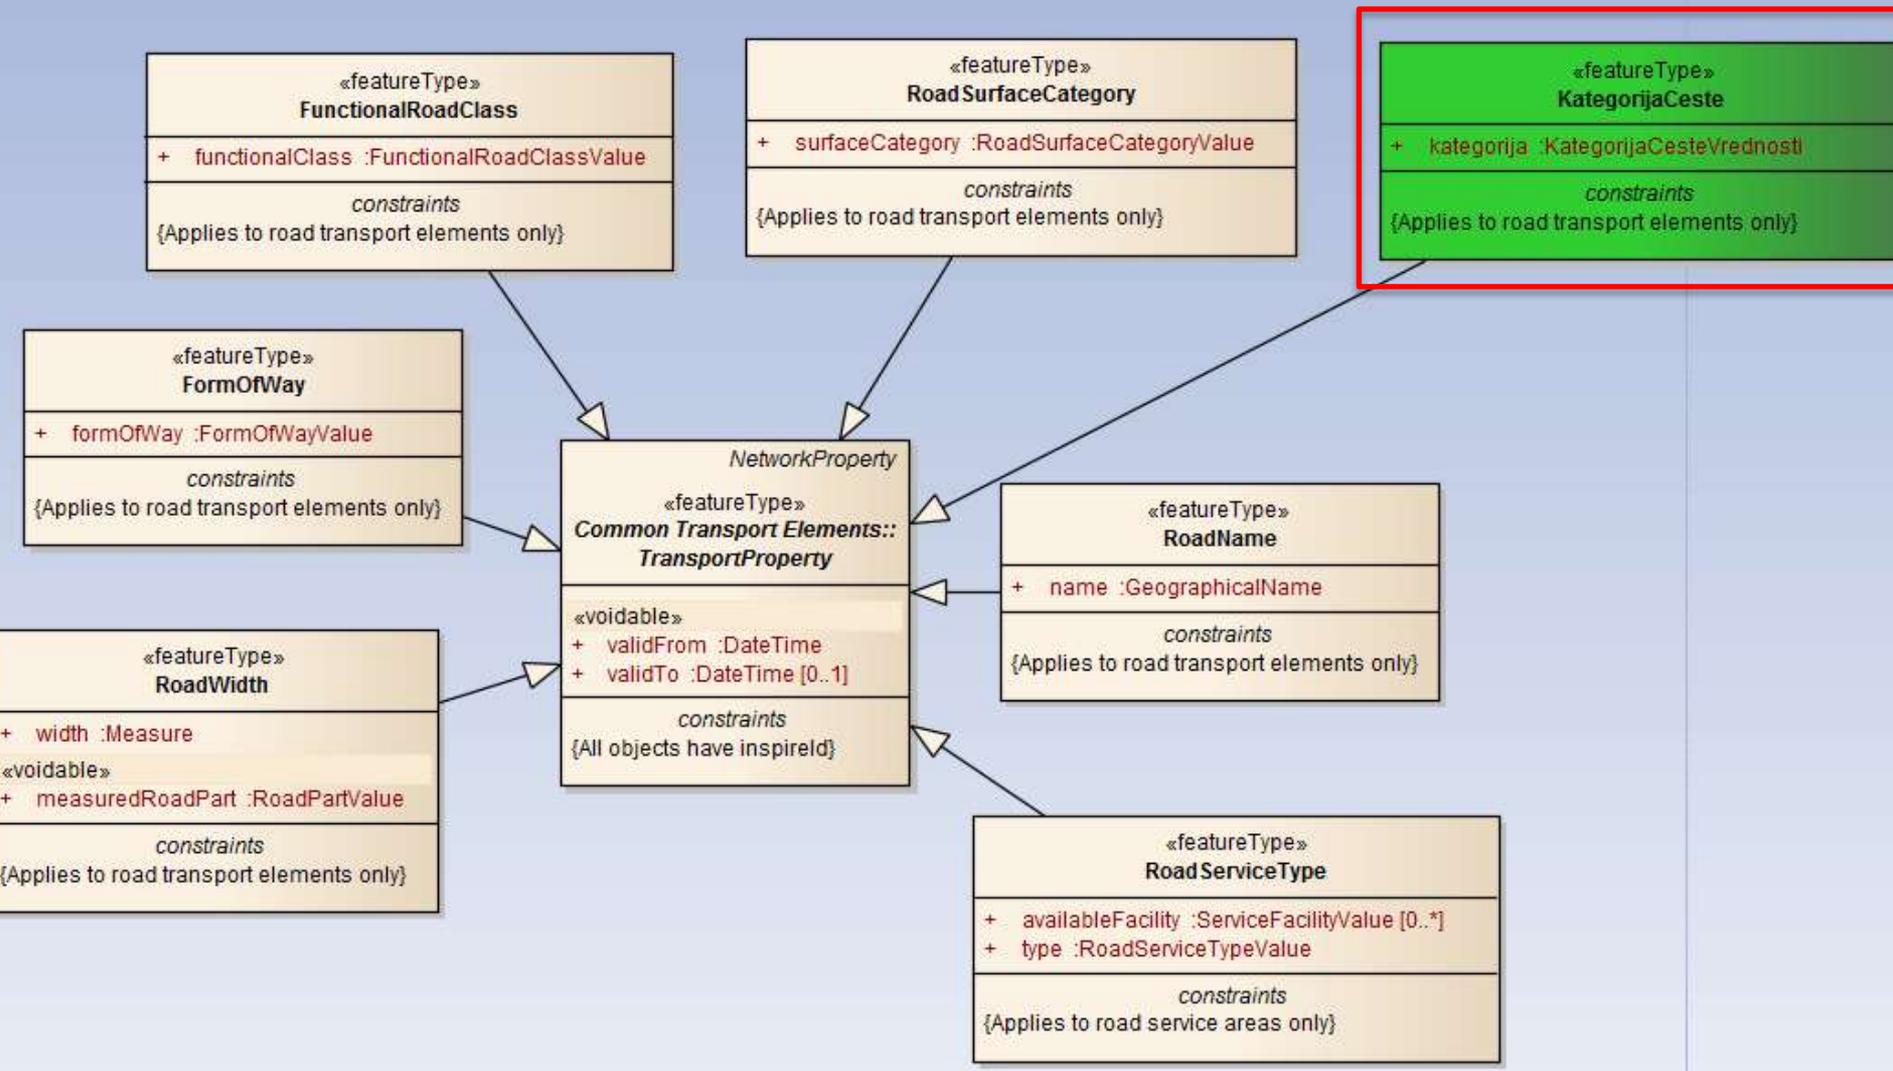

- adopted the concepts and contents of INSPIRE data models, with exclusion of out of scope elements and inclusion of national additions
- Criteria used for exclusion of INSPIRE contents from DTM:
  - not present in our geographical space,
  - out of scope of the SMA,
  - entirely non topographic usage.
- modification was carried out in a way to preserve the integrity of INSPIRE data model(ing) and following the standards.

# DTM-Exclusion of content

# DTM-Adding national content

# DTM-Basic principles (3/3)

- Names of the components in the data model (logical, physical) are in English
- All national additions in the data model are in Slovene
- During the migration we enriched the existing contents with:
  - additional features,
  - additional attributes,
  - establishment of some relationships in the data

# National hydrography dataset (HIDRO5)

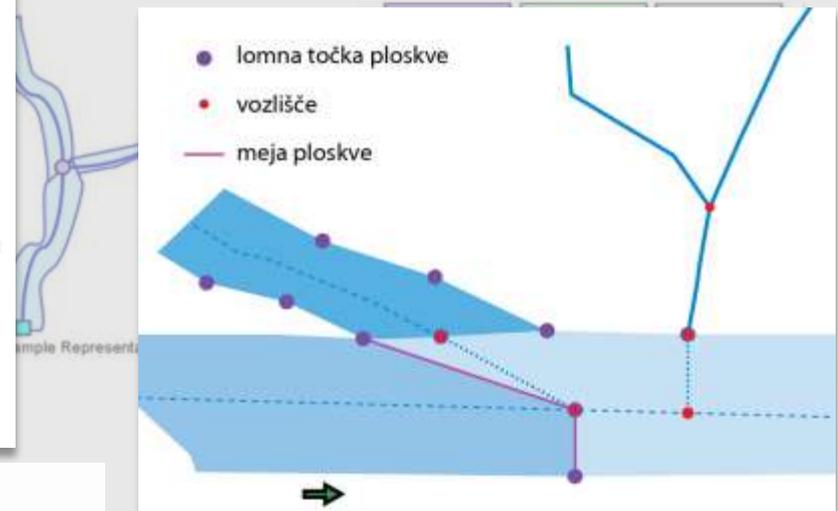

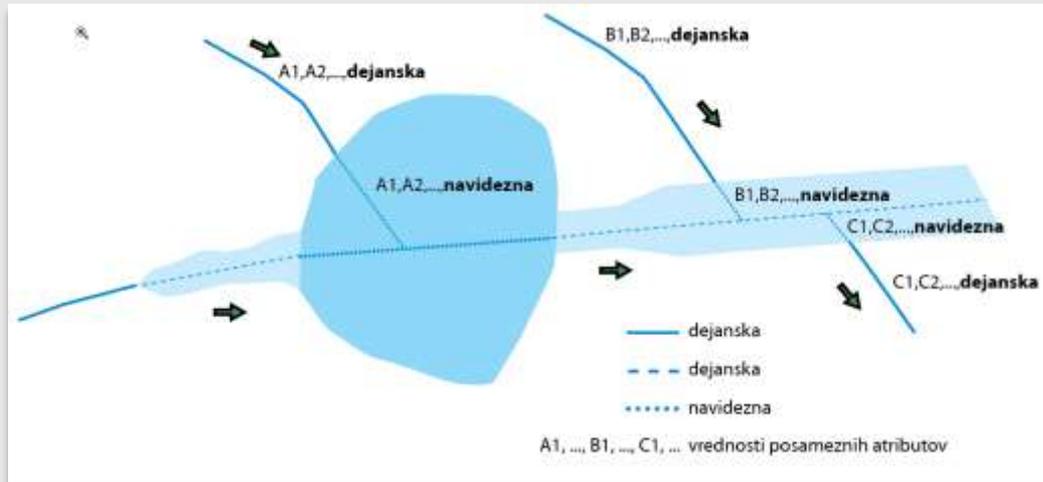

- Data capturing of hidrography data for the entire territory of Slovenia
- Slovenian Ministry of Environment and Spatial Planning
- Level of detail = 1 : 5000 scale
- Following the INSPIRE Technical Guidelines for Hydrography in HIDRO5 product specification

# National hydrography dataset (HIDRO5)

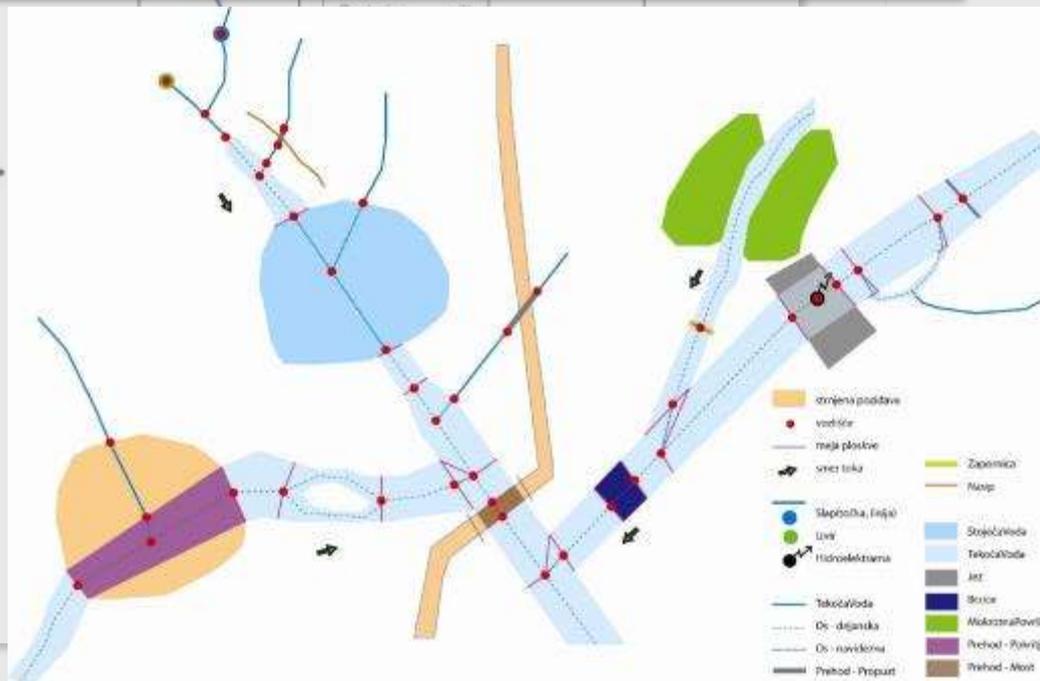

Hidrografija					Dejanska raba
1 Točkovni	2 Linijski PV	3 Linijski	4 Ploskovni PV	5 Ploskovni	6 Dejanska raba -VZ
Slap	Struga vodnega toka	Slap	Struga vodnega toka	Jez	Vodotok
Izvir	Kanal	Zapornica	Kanal	Obalna Konstrukcija	Nasip
Ponor	Akumulacijsko jezero	Nasip	Akumulacijsko jezero	Zapornica	Jezero ali vodni zbiralnik
Hidroelektrarna	Prehod – Akvadukt	Jez	Prehod – Akvadukt	Brod	Morje
Jez	Prehod – Most	Stopnja	Prehod – Most	Brzice	Ostalo

Stopnja	Prehod – Sifon		Prehod – Sifon	Morje	
	Prehod – Pokritje		Prehod – Pokritje	Prodišče	
	Obcestni jarek		Jezero		
	Melioracijski jarek		Bajer, kal, mlaka, loka		
			Rekreacijski bazen		
			Industrijski bazen		
			Vodni zbiralnik		
			Soline		
			Mrtvi rečni rokav		
			Melioracijski jarek		

Addoption of certrain INSPIRE feature types

# National hydrography dataset (HIDRO5)

Linke (d via HydroBaseObject)  
e 39 – relation between representation, physical waters / related objects

## 10.2.4 Connecting watercourses

Links can only join at nodes (see section 7). Where a watercourse flows into another watercourse and one or both are represented as an area shape on the map there are two options for connecting both watercourses:

1. The link of the watercourse is extended at the edge in such a way that it is connected to the link of the other watercourse.
2. An additional node is inserted on the edge of the watercourse from where a small, fictitious, link connects it to the link of the other watercourse.

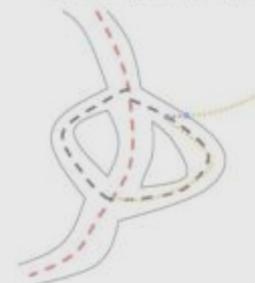

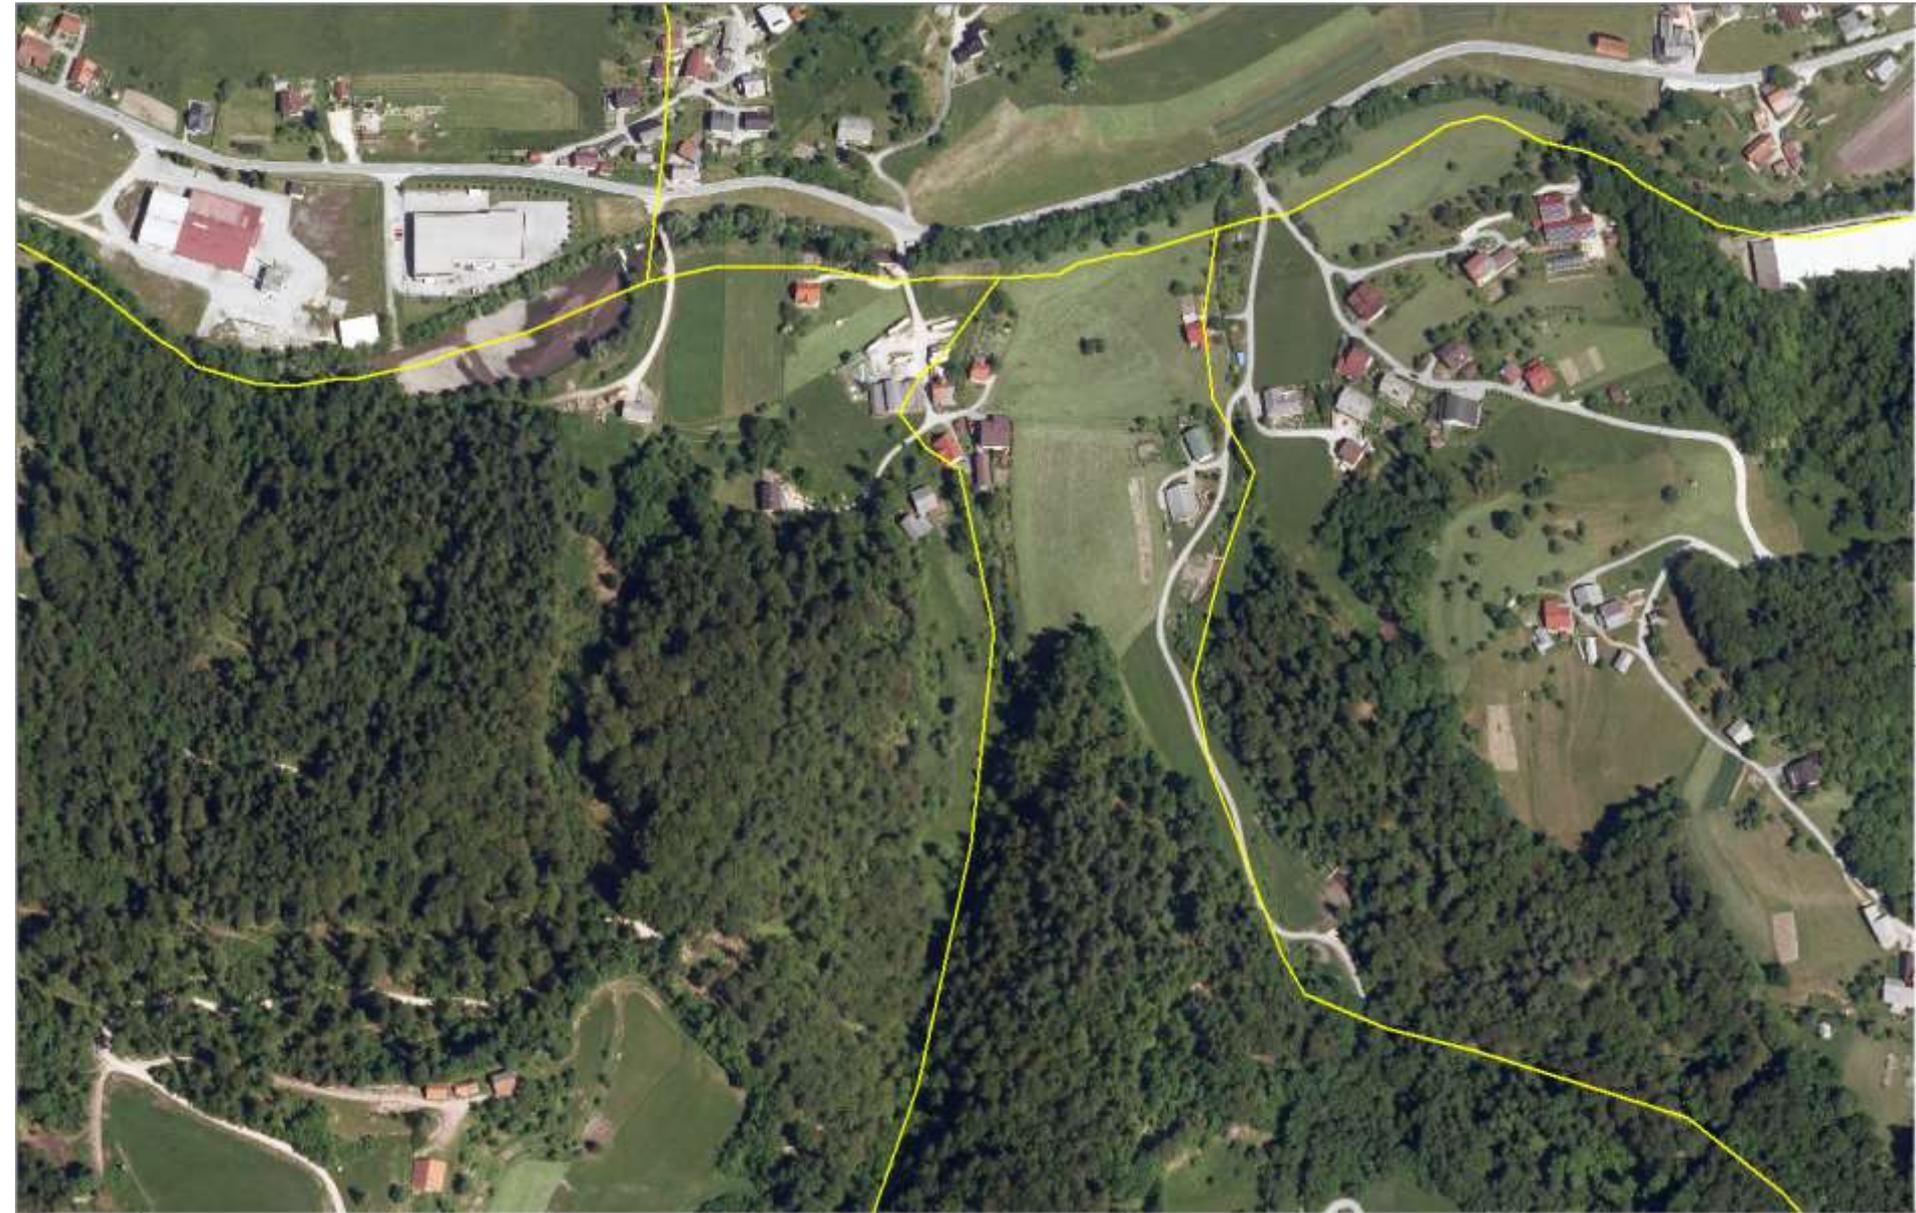

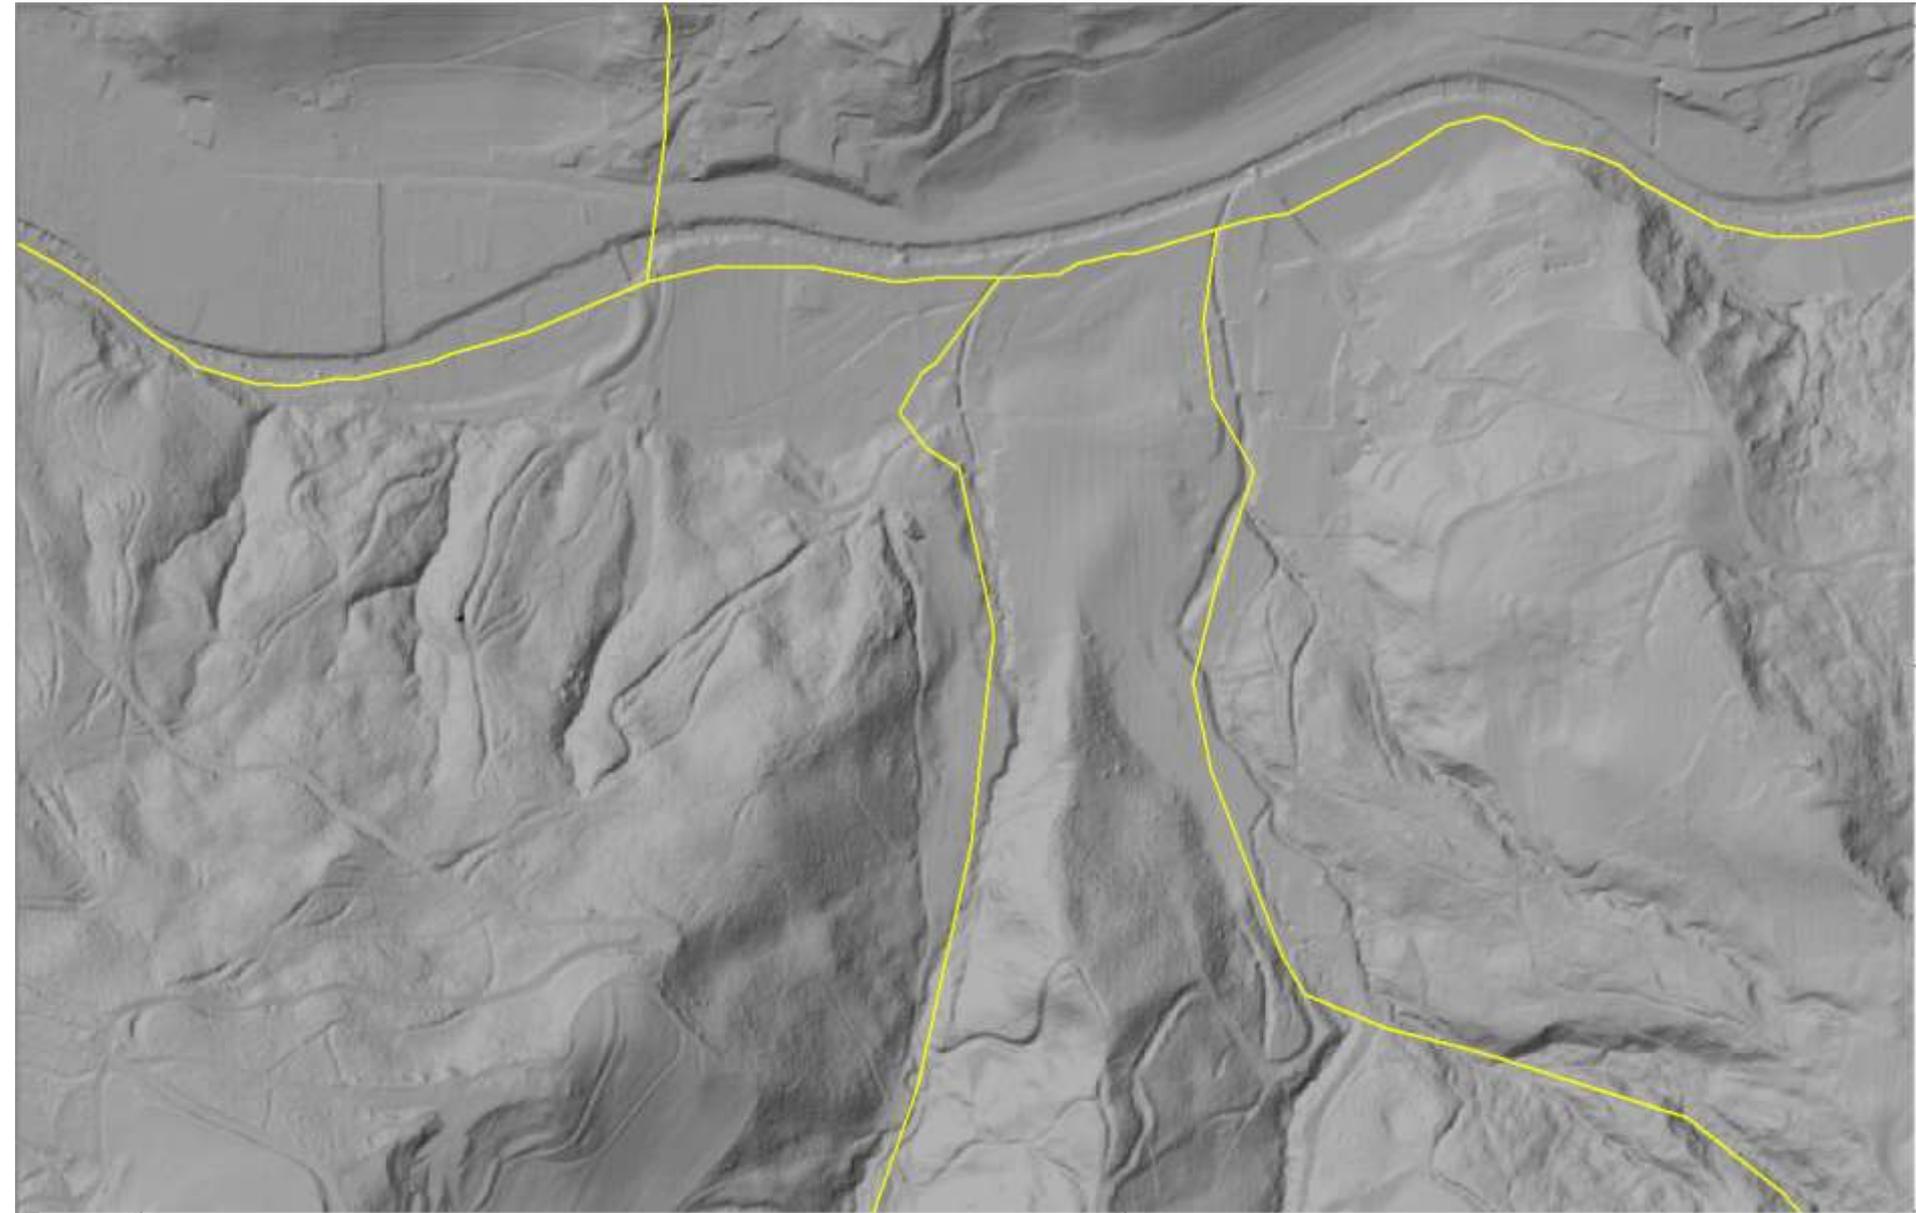

Figure 26 - insertion of an additional node and small link where two watercourses meet.

Adoption of certain capturing rules regarding topology of the data

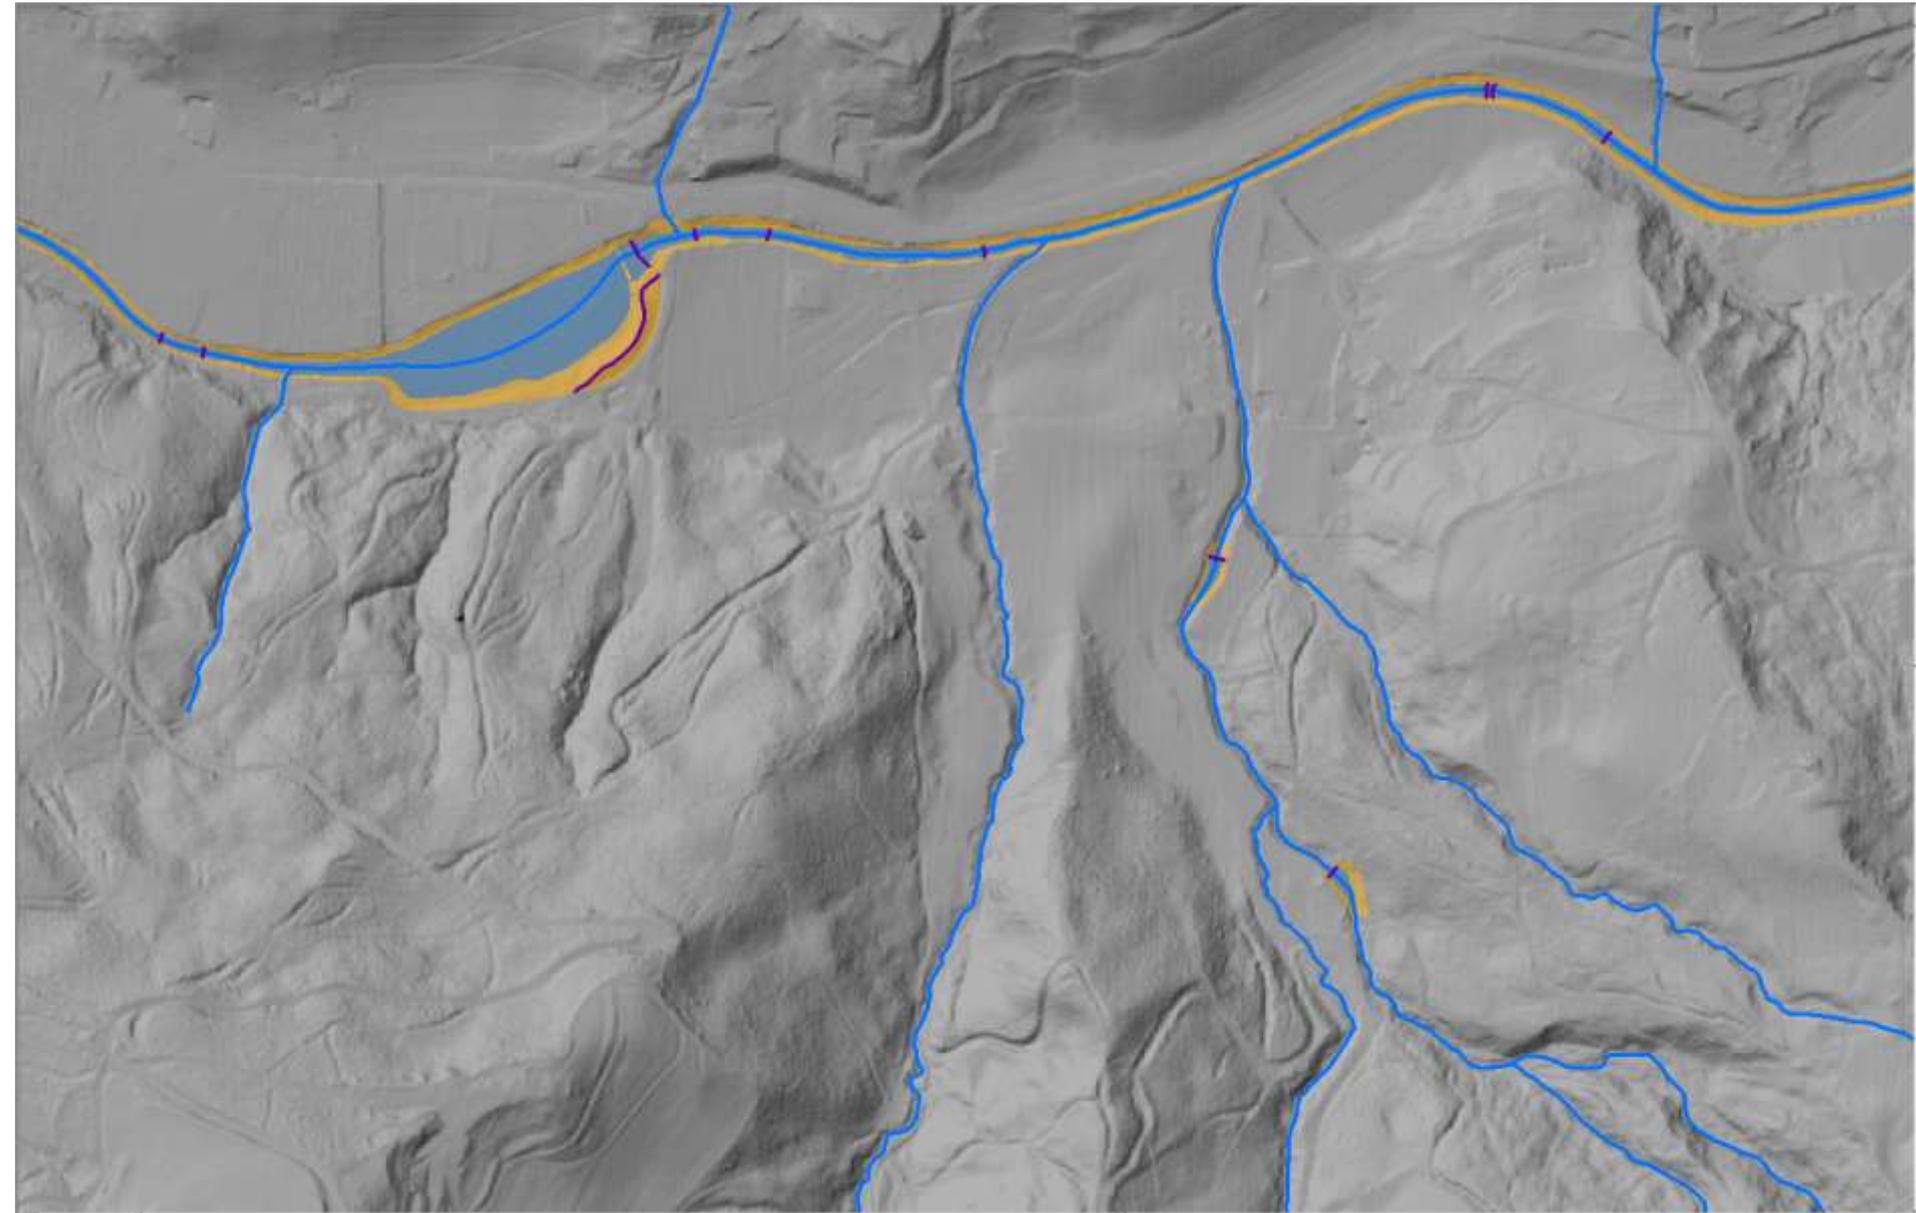

# National hydrography dataset (HIDRO5)

# National hydrography dataset (HIDRO5)

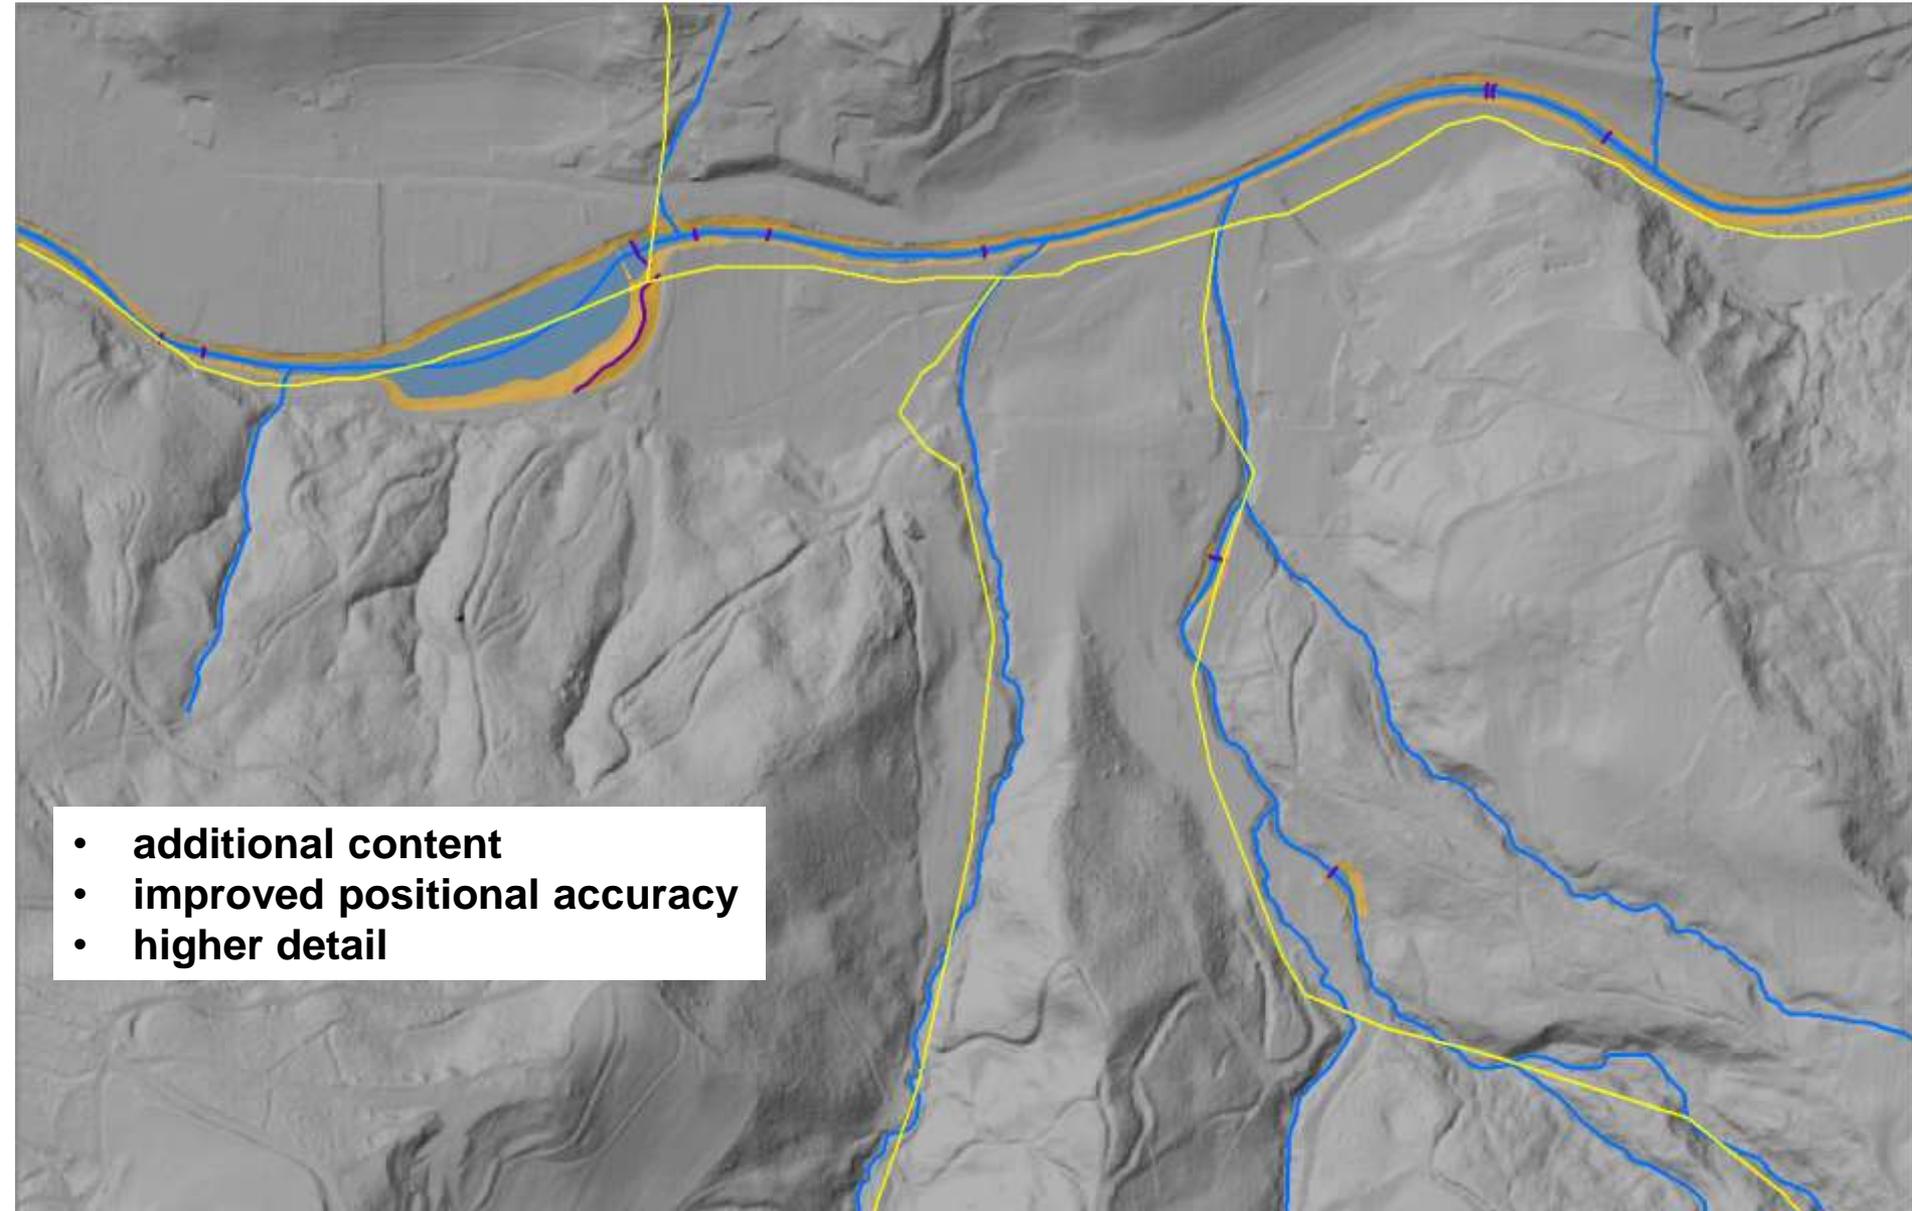

# National hydrography dataset (HIDRO5)

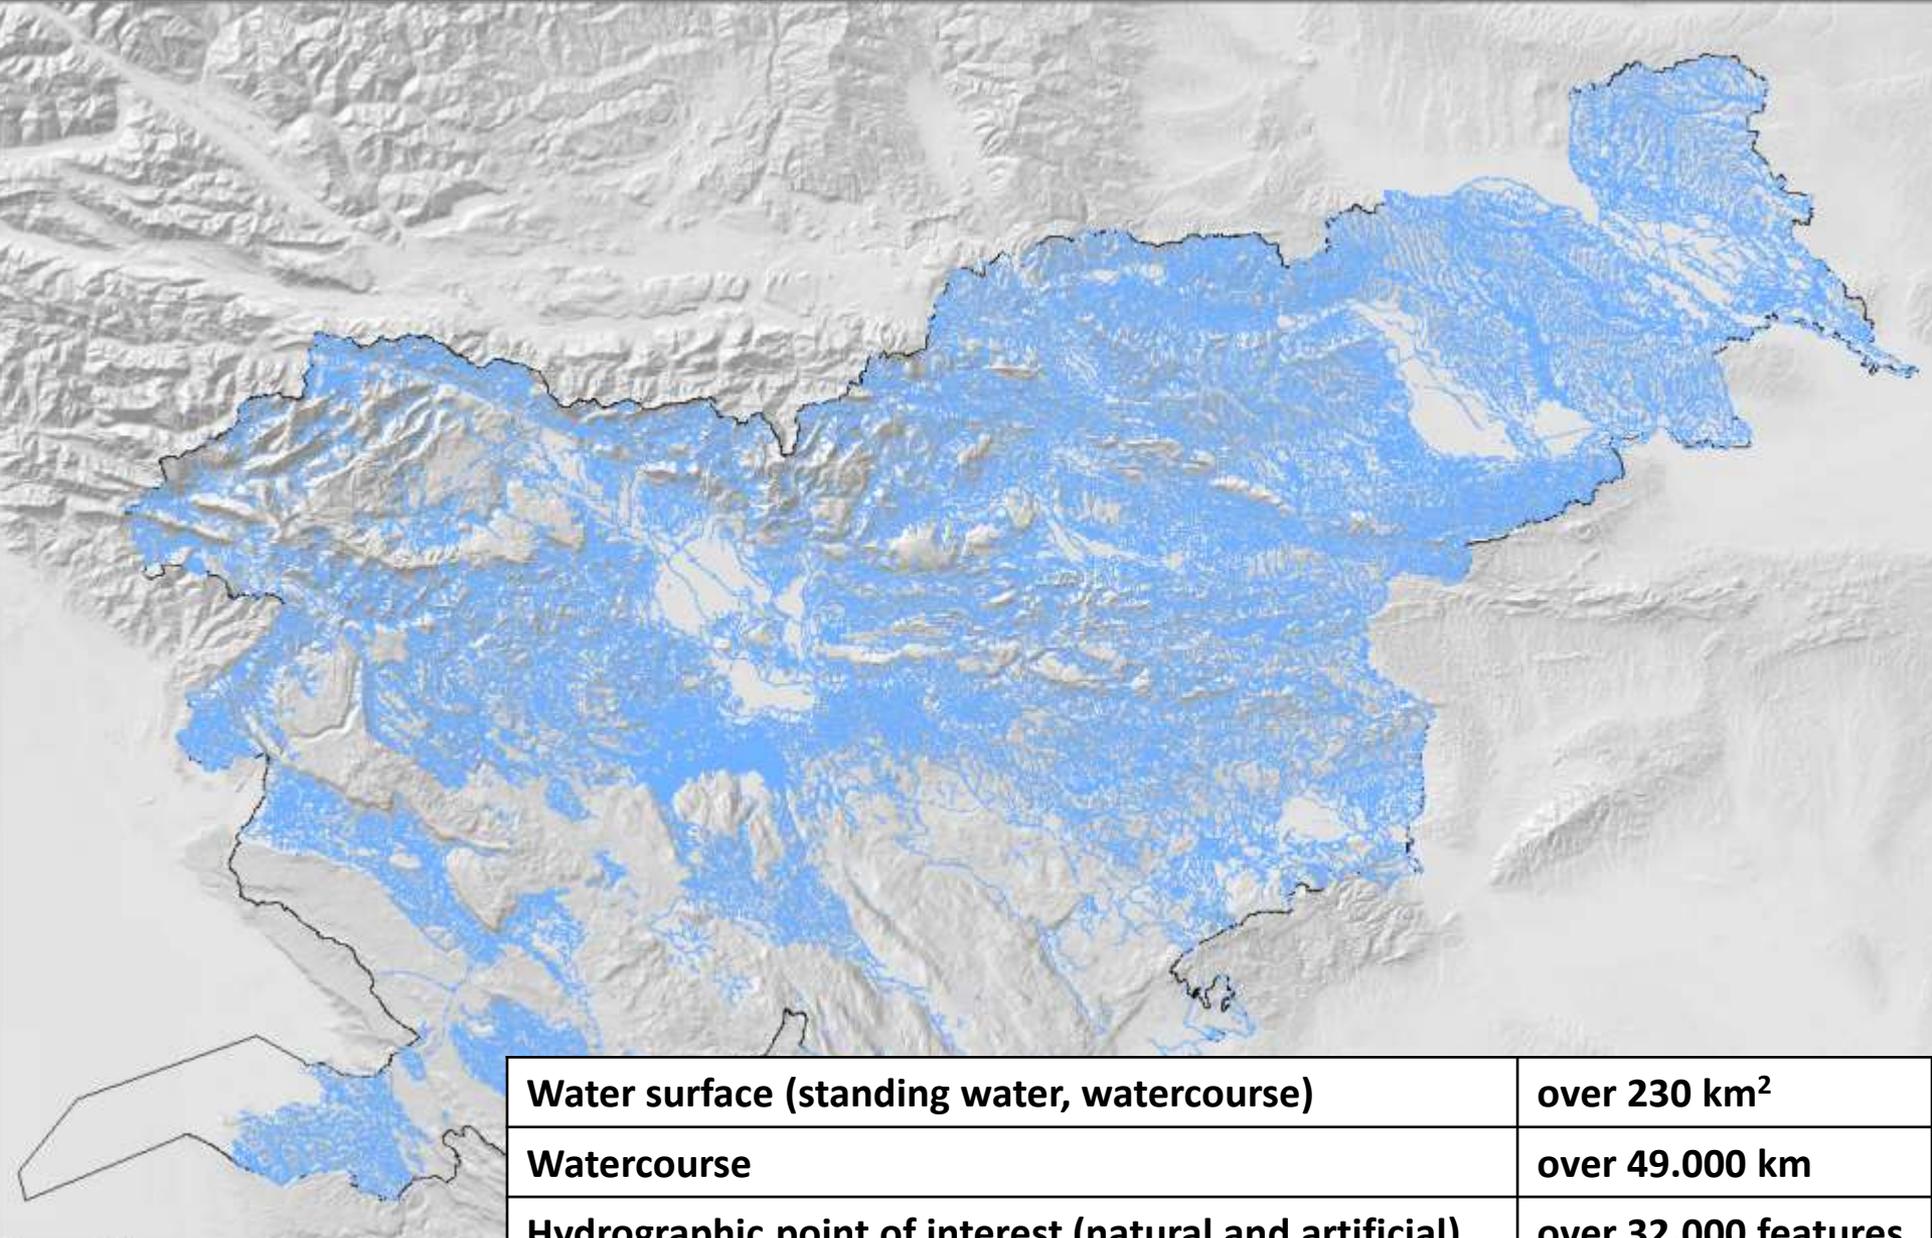

# National hydrography dataset (HIDRO5)

- additional content
- improved positional accuracy
- higher detail

# National hydrography dataset (HIDRO5)

**Water surface (standing water, watercourse)**

**over 230 km<sup>2</sup>**

**Watercourse**

**over 49.000 km**

**Hydrographic point of interest (natural and artificial)**

**over 32.000 features**

# Lessons learned and future work

- Implementation of INSPIRE directive involves technology (services) **and contents** (semantics, features, attributes ..) adaptation on national level
- The complexity of semantics and data modeling in INSPIRE was (and still is) a big step forward but also a great challenge for stakeholders in Slovenia
- Envisaged long term unification with DTM, will have an impact on contents, organisation, procedures, proceses and legislation on national level

Thank you for your attention
