INSPIRE **Interactive** Data Specifications

In house developed set of tools/applications to make the **INSPIRE Data specifications more accessible and usable.**

The target user groups are:

- INSPIRE data providers
- INSPIRE newcomers
- Thematic policy makers
- Service / Solution providers

<http://inspire-regadmin.jrc.ec.europa.eu/dataspecification>

INSPIRE **Interactive** Data Specifications

Two applications:

- 1. Find your scope** - helps you with data transformation tasks by selecting the INSPIRE spatial object type(s) and their properties relevant to your datasets.
- 2. Data Specifications** - simplifies on-line reading of selected parts of the INSPIRE Data Specification – Technical Guidelines. You can also compare sections of two different data themes (e.g. The Use case descriptions or recommended Portrayal rules).

Intro | Read/Compare Technical Guidelines | **Find your scope** | Favorites

The process of building of the European Spatial Data Infrastructure based on the INSPIRE requirements and recommendations is now fully in its implementation phase. See the official INSPIRE Roadmap

This INSPIRE Interactive Data specification site offers INSPIRE data providers with all resources/tools related to the implementation of the INSPIRE data specifications.

TECHNICAL GUIDELINES **FIND YOUR SCOPE**

Please, use the **Feedback** button to send us any suggestions, improvements or bugs.

This set of applications was developed in the framework of the official EU INSPIRE Mapping and Thematic Interoperability Implementation Framework (MIF) defined under work package 1 (MWP 1) - Improve accessibility and readability of TG. MIF

The development of the tools accessible on this site has been supported by ARE3NA, A... 17 of the EU ISA Programme.

About | Contact | Legal notice  

Find your scope

helps you with data transformation tasks by selecting the INSPIRE spatial object type(s) and their properties relevant to your datasets using the following tools:

Interactive Workflow

offers with an intuitive selection of INSPIRE data theme followed by the selection of relevant application schema(s). The next step is about selecting concrete spatial objects based on their definitions.

Direct Search

helps you to iteratively search for INSPIRE objects. The search engine looks in the labels, definitions and descriptions of all existing/defined INSPIRE spatial objects, application schemas and data themes.

Catalogue of INSPIRE objects

presents a Catalogue of all spatial objects defined by INSPIRE. The Catalogue allows you to search for objects in alphabetical order. The Catalogue can also be filtered to show only spatial object types, data types or code lists / enumerations.

Find your scope

INSPIRE
Interactive Data Specifications

European Commission > INSPIRE > INSPIRE Interactive Data Specifications > Find your scope

Intro Read/Compare Technical Guidelines **Find your scope** Favorites

The application **Find your scope** supports data providers with identification of the INSPIRE spatial data themes and spatial object types that are relevant to the dataset(s) they administer. This application is foreseen to be useful especially in situations when datasets fall under two or more INSPIRE data themes / application schemas content. The application also serves as a catalogue of all objects defined by INSPIRE.

There are three possible ways for "finding your scope" or INSPIRE objects:

- CATALOGUE OF INSPIRE OBJECTS
- INTERACTIVE WORKFLOW**
- DIRECT SEARCH

The main result

The main outcome of this application is the list of the INSPIRE objects, their properties – attributes, code lists values etc. which are relevant to one's dataset(s). The final list also includes all associated objects and their properties.

Additional results

Apart from the main list of relevant INSPIRE objects a data provider after completing the whole interactive workflow will be also able to:

1. Find a spatial object type and its property defined by INSPIRE definitions.
2. Identify data properties needed to be transformed according to INSPIRE definitions.
3. Identify missing information in his/her dataset that is required by INSPIRE object definitions. (Gap Analysis)
4. Identify a potential INSPIRE data theme extension, to cover his/her full dataset scope.

INSPIRE Interactive Data Specifications

European Commission > INSPIRE > INSPIRE Interactive Data Specifications > Find your scope > Interactive Workflow > Themes

Home Application systems Pre-selection Selection refinement

Please, select one or more themes based on their definition and description.

Annex I

- Administrative Units
- Cadastral Parcels
- Geographical grid systems
- Hydrography
- Protected Sites
- Transport Networks
- Addresses
- Coordinate reference systems
- Geographical Names

Annex II

- Geology
- Geomorphology
- Land Use

Annex III

- Atmospheric Conditions
- Bio-geographical Regions
- Buildings
- Environmental Monitoring Facilities
- Human health and Safety
- Land Use
- Mineral Resources
- Oceanographic Geographical Features
- Population Distribution - Demography
- Production and Industrial Facilities
- Sea Regions
- Soil
- Species Distribution
- Statistical Units
- Agricultural and Aquaculture Facilities
- Area Management Restriction Regulation Zones and Reporting units
- Meteorological geographical features
- Energy Resources
- Habitats and Biotopes
- Natural Risk Zones
- Utility and Governmental Services

Summary

1. Selected themes:

1. Geology
2. Land Use

Next

Land Use

Definition: Territory characterised according to its current and future planned functional dimension or socio-economic purpose e.g. residential industrial commercial agricultural forestry recreational

Description: Land Use theme is defined as the use and functions of a territory, and it is description of land in terms of its socio-economic and ecological purpose. Land use theme is itself split in two different types:
The Existing Land Use which objectively depicts the use and functions of a territory as it has been and effectively still is in real life.
The Planned Land Use which corresponds to spatial plans defined by spatial planning authorities depicting the possible utilization of the land in the future.
Two types of classification systems are supported by Land Use theme: the obligatory hierarchical INSPIRE Land Use Classification System which is a multi-level classification system that will apply to the existing and planned land use; the optional specific classification system in use in a member state.

Application scheme - Geology

- ISG, Issue
- ISG, Model
- Mapping title

Geologic structure - Abstract - Spatial object type
A configuration of matter in the Earth based on describable inhomogeneity, pattern, or fracture in an earth material.

- Fold - Spatial object type
One or more systematically curved layers, surfaces, or lines in a rock body.
- Shear Displacement Structure - Spatial object type
Brittle to ductile style structures along which displacement has occurred.

Geomorphologic Feature - Abstract - Spatial object type
An abstract spatial object type describing the shape and nature of the Earth's land surface (i.e. a landform).

- Anthropogenic Geomorphologic Feature - Spatial object type
A geomorphologic feature (i.e. landform) which has been created by human activity.
- Natural Geomorphologic Feature - Spatial object type
A geomorphologic feature (i.e. landform) that has been created by natural Earth processes.

Geologic Feature - Abstract - Spatial object type
A conceptual geological feature that is hypothesized to exist coherently in the world.

- Geologic Structure - Spatial object type
A configuration of matter in the Earth based on describable inhomogeneity, pattern, or fracture in an earth material.
- Geologic Unit - Spatial object type
A volume of rock with distinct characteristics.
- Geomorphologic Feature - Spatial object type
An abstract spatial object type describing the shape and nature of the Earth's land surface (i.e. a landform).
- Earth Resource - Spatial object type
The kinds of observable or inferred phenomena required to classify economic and non-economic earth resources.
- Geologic Collection - Spatial object type
A collection of geological or geophysical objects.
- Mapped Interval - Spatial object type
A special kind of mapped feature whose shape is a 1-D interval and which uses the SRS of the containing borehole.

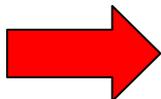

Composition Part - Data type
The composition of a geologic unit in terms of lithological constituents.

Thematic Class - Data type
A generic thematic classifier to enable the reclassification of Geologic Features with user defined classes appropriate to thematic maps.

- Geologic Event - Spatial object type
An identifiable event during which one or more geological processes act to modify geological entities.
- Mapped Feature - Spatial object type
A spatial representation of a Geologic Feature.
- Borehole - Spatial object type
A borehole is the generalised term for any narrow shaft drilled in the ground.

Catalogue of INSPIRE object types

The screenshot shows the INSPIRE Interactive Data Specifications website. At the top, there is a navigation bar with the INSPIRE logo and the text "Interactive Data Specifications". Below this, there is a search bar and a "Find your scope" button. The main content area features three icons representing different ways to find objects: "CATALOGUE OF INSPIRE OBJECTS", "INTERACTIVE WORKFLOW", and "DIRECT SEARCH". A red arrow points to the "CATALOGUE OF INSPIRE OBJECTS" icon. Below the icons, there is a section titled "The main result" and "Additional results" with a list of four points.

INSPIRE
Interactive Data Specifications

European Commission > INSPIRE > INSPIRE Interactive Data Specifications > Find your scope

Intro | Read/Compare Technical Guidelines | Find your scope | Favorites

The application Find your scope supports data providers with identification of the INSPIRE spatial data themes and spatial object types that are relevant to the dataset(s) they administer. This application is foreseen to be useful especially in situations when datasets fall under two or more INSPIRE data themes / application schemas content. The application also serves as a catalogue of all objects defined by INSPIRE.

There are three possible ways for "finding your scope" or INSPIRE objects:

- CATALOGUE OF INSPIRE OBJECTS
- INTERACTIVE WORKFLOW
- DIRECT SEARCH

The main result

The main outcome of this application is a list of the INSPIRE objects, including their properties - attributes, code lists values etc., which are relevant to one's dataset(s). The final list also includes associated objects and their properties.

Additional results

Apart from the main list of relevant INSPIRE objects a data provider after completing the whole interactive workflow will be also able to:

1. Find a spatial object and its property defined by INSPIRE.
2. Identify data properties needed to be transformed according to INSPIRE definitions.
3. Identify missing information in his/her dataset that is required by INSPIRE object definitions. (Gap Analysis)
4. Identify a potential INSPIRE data theme extension, to cover his/her full dataset scope.

B67 Objects

- Access Restriction** - Spatial object type - [Application schema Common Transport Elements]
A restriction on the access to a transport element.
- Access Restriction Value** - Code list - [Application schema Common Transport Elements]
Types of access restrictions for a transport element.
- Active Well** - Spatial object type - [Application schema Hydrogeology]
A well influencing the groundwater resources of the aquifer.
- Active Well Type Value** - Code list - [Application schema Hydrogeology]
Types of active wells.
- Activity Complex** - [Application schema Production and Industrial Facilities]
- Activity Complex** - Spatial object type - [Application schema Activity Complex]
A "single unit", both technically and economically, under the management control of the same legal entity (operator), covering activities as those listed in the Eurostat NACE classification, products and services. Activity Complex includes all infrastructure, equipment and materials. It must represent the whole area, at the same or different geographical location, managed by a "single unit".
- Activity Complex Description** - Data type - [Application schema Activity Complex]
Additional information about an activity complex, including its description, address, contact and related parties.
- Additional classes from GCM Observations** - [Application schema Environmental Monitoring Facilities]
- Address** - Spatial object type - [Application schema Addresses]
An identification of the best location of property by means of a structured composition of geographic names and identifiers.
- Address Area Name** - Spatial object type - [Application schema Addresses]
An address component which represents the name of a geographic area or locality that groups a number of addressable objects for addressing purposes, without being an administrative unit.

Annex B (Informative)
Use cases

The annex describes the use cases related to Geology (Interpreting & Transferring Data into and out of the INSPIRE environment) for the development of the data specifications. The annex collection of use cases is to be used by other thematic domains (geographical information, planning and operations, security, emergency response, etc.) as described in the document 'Transfer of use cases'.

The following use cases are described:

- UC01: Providing geological data to detect geo-hazards
- UC02: Providing geological data to ensure safe disposal of waste
- UC03: Providing geological data to detect ground instability in a flat area
- UC04: Looking for deep hydrocarbon reserves in the basement (Structural explanation)
- UC05: Checking hydrological indicators (soil charges)
- UC06: Providing data to undertake water balance to ensure compliance with the WFD
- UC07: Groundwater mapping for WFD
- UC08: Providing hydrogeological data to define significant processes
- UC09: Providing data to assess Community to underground storage
- UC10: Providing data to plan handling operations safety and efficiency

E.1 UC01: Providing geological data to detect geo-hazards
UC 01: Detecting geo-hazards

Overview and involved actors

The use case is a part of a larger project: user case which involves risk map in a geographical context. It uses other data than geological data (the meteorological data, elevation of the ...) in the domain management plan.

The goal of the use case is to detect in other geological data in the region available in the map and map.

Actors

Geological engineer in provide geological information (Geological Survey represent by Member States)
Engineer responsible for establishing risk map using the geological information in combination with other data.

Stakeholder description

The hazard is also related to the probability of occurrence of a potentially disruptive phenomenon which is given area and a given period of time. To define the probability the engineer has to access and describe the climatic conditions, topographic properties of soils.

Detailed description

Land Use

Annex B (Informative)
Use cases

E.1 Introduction

The use case is a part of a larger project: user case which involves risk map in a geographical context. It uses other data than geological data (the meteorological data, elevation of the ...) in the domain management plan.

The goal of the use case is to detect in other geological data in the region available in the map and map.

Actors

Geological engineer in provide geological information (Geological Survey represent by Member States)
Engineer responsible for establishing risk map using the geological information in combination with other data.

Stakeholder description

The hazard is also related to the probability of occurrence of a potentially disruptive phenomenon which is given area and a given period of time. To define the probability the engineer has to access and describe the climatic conditions, topographic properties of soils.

INSPIRE **Interactive** Data Specifications

Data sources for the apps:

- INSPIRE consolidated UML data model repository (EA)
- INSPIRE Registry:
 - Code list & enumeration registers,
 - Application schema register,
 - Data theme register
- INSPIRE Data specification-Technical guidelines documents

INSPIRE **Interactive** Data Specifications

- **Simplifies the use** of INSPIRE data interoperability documentation
- Understand whether your **datasets need to be transformed** and which parts
- The final set of relevant INSPIRE objects **gives you a direct entry** (Target schema) to the **transformation** SW tool HALE
- **Find quickly information** (e.g. definition and data properties) about each of the INSPIRE object types
- **Facilitates data interoperability** in the environmental and other domains.
